

CONTENTS

INTRODUCTION.....	3
1. ELEMENTS OF ARITHMETIC IN OBSERVER'S MATHEMATICS.....	4
1.1. Operations over numbers — elements $\in W_n$	5
1.2. Complex numbers.....	16
1.3. Last Fermat's, Fermat's and Mersenne's numbers, Waring's problems.....	18
1.3.1. <i>Analogy of Fermat's Last Problem</i>	18
1.3.2. <i>Analogy of Mersenne's and Fermat's Numbers Problems</i>	20
1.3.3. <i>Analogy of Waring's Problem</i>	21
1.4. Lehmer's Number.....	27
1.5. Euler Brick and Perfect Cuboid problems.....	29
1.6. Square Peg Problem.....	30
1.7. Classic problem — trisection of angle.....	34
2. ELEMENTS OF ALGEBRA IN OBSERVER'S MATHEMATICS.....	40
2.1. Space $E_m W_n$	40
2.2. Scalar product in $E_m W_n$	44
2.3. Vector product in $E_3 W_n$	48
2.4. Operations over matrices.....	55
2.5. Linear equations.....	56
2.6. Analogy of Hilbert's Tenth Problem.....	59
3. ELEMENTS OF GEOMETRY IN OBSERVER'S MATHEMATICS.....	63
4. ELEMENTS OF MATHEMATICAL ANALYSIS — CALCULUS IN OBSERVER'S MATHEMATICS.....	67
4.1. Derivative definitions.....	67
4.2. Examples of derivative calculations for linear function.....	71
4.3. Examples of derivative calculations for quadratic function.....	75
4.4. Integral definition.....	90
4.5. Derivative properties in Observer's Mathematics.....	91
4.6. Integral properties in Observer's Mathematics.....	96

5. NADEZHDA EFFECT AND BLACK HOLES IN OBSERVER'S MATHEMATICS.....99

APPENDIX. Nikolai Khots "Universal Criterion for Natural Numbers Divisibility" 102

Abstract 102

Introduction..... 102

Universal Divisibility Criterion..... 103

Literature Review..... 105
